In 2025, the global production of linalyl acetate was approximately 16,200 tons, with an average selling price of around US\$11,800 per ton. Single-line production capacity is approximately 500-1000 tons per year, with an average gross profit margin of about 15-25%. Linalyl acetate is the acetate ester of linalool, a terpene alcohol ester. At room temperature, it is a colorless, transparent liquid with a sweet, fresh, elegant floral and fruity aroma similar to lavender and bergamot. It is an important fragrance ingredient in the perfume, cosmetics, and food industries, and is also naturally present in various plant essential oils, possessing aromatherapy effects that soothe the nerves.

The core upstream raw material for linalyl acetate is linalool, which is mainly sourced from L-linalool separated from turpentine oil and DL-linalool chemically synthesized from petrochemical raw materials. Downstream applications are highly concentrated in the fragrance and flavor industry, where it is widely used as a key ingredient to provide fresh floral and fruity scents in the formulation of daily chemical fragrances (such as perfumes and detergents) and food flavors (such as beverages and candies).

United States market for Linalyl Acetate is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
