The global Line Pulling Swivels market size is predicted to grow from US$ 272 million in 2025 to US$ 382 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

In 2024, global line pulling swivel output reached about 7.8 million units against a total production capacity of roughly 9.5 million units, with average unit price USD 33, and manufacturers averaging a 29% gross margin. Line Pulling Swivels are mechanical connectors used in overhead line construction and underground cable installation to prevent twisting, binding, or torque transfer while pulling conductors, fiber-optic cables, or utility lines; they typically feature high-strength alloy steel or stainless-steel bodies, precision ball-bearing or tapered-roller mechanisms, and torque-balanced designs to ensure smooth rotation under high tensile loads. The supply chain begins with upstream raw materials such as alloy steels, stainless steels, heat-treating services, and precision-machined components, then moves to midstream manufacturing where CNC machining, heat treatment, surface finishing, and assembly of bearing systems produce finished swivels, before downstream integration by utility contractors, transmission line installers, telecom deployment firms, and distributors supplying power grid, rail, industrial, and fiber-optic installation projects.

United States market for Line Pulling Swivels is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Line Pulling Swivels is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
