The global Line Voltage and Low Voltage (12v & 24v) Lighting market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Line voltage means that it?s running on the line voltage of the home without a transformer, which is 120 volts. Low voltage means there?s a transmitter, and [the electricity is] being transformed so the 120 volts is being brought down to 12 volts.

Typically the advantage of line voltage is that it?s going to be a less expensive fixture because you don?t have a transformer and on the other hand low voltage uses smaller light bulbs, so you can have more compact fixtures.
