Linear accelerator is a device which destroys the cancer cells without affecting the surrounding normal cells. Linear accelerator (LINAC) functions in a way that it accelerates electrons through a linear tube with high speeds resulting in x-rays emission. Higher x-rays generate large electronic potential which is useful in longer accelerating cavity resulting in greater efficiency for destruction of tumors. Linear accelerator (LINAC) can be utilized on any part of human body with greater efficiency for brain tumor applications.

The global Linear Accelerator market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
