In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Linear Alpha Olefins market for 2018-2023. Linear alpha olefins (LAO) are olefins or alkenes with a chemical formula C_xH_{2x} , distinguished from other mono-olefins with a similar molecular formula by linearity of the hydrocarbon chain and the position of the double bond at the primary or alpha position. Growing demand for Poly-Alpha-Olefins which is used in synthetic lubricants used in automobile engines and increased demand for polyethylene which is used in the packaging industry will continue to drive the linear alpha-olefins market during the forecast period. Increasing demand from various industries for LLDPE, which is used as packaging material, is also contributing towards the growth of the Linear-Alpha Olefins market. Easy availability of raw materials for alpha olefin production is also projected to increase the market growth of Linear Alpha-Olefins. The growth of automotive and consumer goods industry and positive outlook on oilfield drilling activities is expected to affect the Linear-Alpha Olefins demand positively.

Over the next five years, LPI(LP Information) projects that Linear Alpha Olefins will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
