## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Linear Alpha Olefins market for 2018-2023. Linear alpha olefins (LAO) are olefins or alkenes with a chemical formula  $C_xH_{2x}$ , distinguished from other mono-olefins with a similar molecular formula by linearity of the hydrocarbon chain and the position of the double bond at the primary or alpha position. Growing demand for Poly-Alpha-Olefins which is used in synthetic lubricants used in automobile engines and increased demand for polyethylene which is used in the packaging industry will continue to drive the linear alpha-olefins market during the forecast period. Increasing demand from various industries for LLDPE, which is used as packaging material, is also contributing towards the growth of the Linear-Alpha Olefins market. Easy availability of raw materials for alpha olefin production is also projected to increase the market growth of Linear Alpha-Olefins. The growth of automotive and consumer goods industry and positive outlook on oilfield drilling activities is expected to affect the Linear-Alpha Olefins demand positively.

Over the next five years, LPI(LP Information) projects that Linear Alpha Olefins will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
