Linear drainage ditches are made of resin concrete materials. The cement component is abandoned. Different levels of aggregates are mixed and formed through resin. The finished linear drainage ditch system has the advantages of high strength and high load-bearing level. Products of the same volume are more durable than ordinary cement products. The pressure level is obviously several times higher, and because the drainage system is completely modular, it is easier to assemble manually during construction, which reduces costs. The product is resistant to freezing and can effectively prevent erosion by various chemicals. It can also be used for a long time under conditions with complex sewage composition. It is a modern drainage product commonly used in Europe and the United States, and is being widely used in more and more domestic projects.

The global Linear Drain market size is projected to grow from US$ million in 2024 to US$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
