A linear gauge is a device used to measure the amount of displacement of an object to be measured.

It is used to measure the number of rotations of a shaft or to optically measure the amount of displacement of a device that is driven in a specific direction. It consists of a moving slit attached to the measurement target, two fixed slits, and a machine that counts the waveform of the slit as a pulse wave. The moving force of the measurement target is recognized as a pulse wave, and the degree to which the measurement target has moved by the number of waves can be measured. The measurement accuracy depends on the slit spacing.

The global market for Linear Gauge is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Linear Gauge market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The United States Linear Gauge market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
