Linear Pluggable Optics (LPO) is a term used in the context of optical networking to describe a form factor and interface standard for high-speed optical transceivers. LPO modules are designed to provide flexible and modular optical connectivity in networking equipment, such as switches and routers. The concept of LPO emerged as a response to the need for a compact, hot-swappable, and interoperable form factor for high-speed optical transceivers. LPO modules are typically small in size and feature a pluggable design that allows for easy installation and removal without interrupting network operation. LPO modules are commonly used in data centers, telecommunications networks, and other high-bandwidth applications where flexible and scalable optical connectivity is essential. They offer a modular approach to optical networking, allowing for easy upgrades, replacement, and scalability as network bandwidth requirements evolve.

The global Linear Pluggable Optics (LPO) market size is projected to grow from US\$ 404 million in 2024 to US\$ 42780 million in 2030; it is expected to grow at a CAGR of 117.5% from 2024 to 2030.
