A Lined Sight Flow Indicator is a device used in the field of industrial fluid measurement. It consists mainly of a transparent viewing part and a lined pipe section. The transparent viewing part allows users to directly observe the flow of the fluid. The lining design is a key feature of this indicator. The lining materials (such as rubber, fluoroplastics, etc.) have excellent corrosion - resistance and abrasion - resistance. When the device is used to convey highly corrosive liquids (such as acid or alkali solutions) or liquids containing solid particles, the lining can effectively protect the main structure of the indicator from being eroded and worn by the fluid, thus prolonging the service life of the device.

United States market for Lined Sight Flow Indicator is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Lined Sight Flow Indicator is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
