A Linux server is a server that uses the Linux operating system.

The Linux OS was originally developed in 1991 by a Finnish university student, Linus Torvalds, in a project. Since it was an open-source concept, it has the advantage of a low investment compared to using a Windows OS, which requires a fee, and since there is little virus software that targets the Linux OS, it has a comparative advantage in terms of security.

The OS itself is lighter than Windows, so it can run comfortably even on a slow CPU, but because it is open source, the speed of evolution is rapid. However, CUI (Character-based User Interface) is required for operation, which is a factor that raises the operational hurdle for user adaptation.

The global LINUX Server market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
