Lipase, also known as glyceride hydrolase, is a type of enzyme with multiple catalytic abilities. It can catalyze the hydrolysis, alcoholysis, esterification, and transesterification of triglycerides and other water-insoluble esters, and promote the reverse conversion of esters. The synthesis reaction is an important part of the organism's process of promoting lipids to enter the metabolic cycle. Lipase in mammals mainly originates from the pancreas, followed by the stomach and small intestine, and can hydrolyze a variety of glycerides containing long-chain fatty acids with low specificity. Significant changes in its activity usually reflect damage to the pancreas and other related diseases.

The global Lipase (LPS) Activity Assay Kit market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
