## Abstracts

The global Liposomal Silybin market size is predicted to grow from US\$ 134 million in 2025 to US\$ 210 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

In 2025, global liposomed silybin production reached approximately 4549 tons, the average price is 30 usd/kg. Liposomed silybin is a high-end formulation that encapsulates and modifies the natural drug silymarin using liposome nanoparticle drug delivery technology. Through its 'phospholipid bilayer' nanostructure, it solves the global challenge of silymarin's poor solubility and absorption, significantly improving its bioavailability and targeting.

The annual production capacity of liposomal silymarin is typically 300-500 tons per year, with a gross profit margin of around 28%.

Downstream consumption of liposomal silymarin is as follows: medical grade 46%, cosmetic grade 39%, other grades 15%.
