The global Liposome Drug Delivery market size is predicted to grow from US\$ 4639 million in 2025 to US\$ 9802 million in 2031; it is expected to grow at a CAGR of 13.3% from 2025 to 2031.

Liposomes have been used to improve the therapeutic index of new or established drugs by modifying drug absorption, reducing metabolism, prolonging biological half-life or reducing toxicity. Drug distribution is then controlled primarily by properties of the carrier and no longer by physico-chemical characteristics of the drug substance only. In a liposome drug product, the drug substance is contained in liposomes. Typically, water soluble drugs are contained in the aqueous compartment(s) and hydrophobic drugs are contained in the lipid layer(s) of the liposomes. Release of drugs from liposome formulations can be modified by the presence of polyethylene glycol and/or cholesterol or other potential additives in the liposome.

Global Liposome Drug Delivery key players include Gilead Sciences, Pacira, Sun Pharmaceutical, Johnson & Johnson, Luye Pharma, etc. Global top five manufacturers hold a share about 60%. North America is the largest market, with a share about 40%, followed by Europe and Asia-Pacific, both with a share about 30 percent. In terms of product, Liposomal Doxorubicin is the largest segment, with a share about 40%. And in terms of application, the largest application is Cancer & Tumor Therapy, followed by Fungal Infection Therapy, etc.
