Liposome technology services refer to the professional technology that provides a series of services such as liposome preparation, optimization, drug encapsulation and evaluation. These services are mainly used in the fields of drug delivery, gene delivery, vaccine delivery and other fields to improve the bioavailability and targeting of drugs and reduce side effects and toxicity.

The application of liposomes as anti-tumor drug carriers is an important development trend. As drug carriers, liposomes can protect drugs from destruction by organisms, while improving the bioavailability and targeting of drugs and reducing side effects and toxicity. In the field of tumor treatment, liposomes are increasingly used and have become an important direction in anti-tumor drug research.
