The global Liquefied Industrial Gas Storage Tanks market size is predicted to grow from US\$ 21790 million in 2025 to US\$ 34810 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Industrial gas storage tanks are special equipment for storing industrial gases (liquid oxygen, liquid nitrogen, liquid argon). The thermal insulation structure of the tank adopts three forms: high vacuum multi-layer thermal insulation, vacuum powder thermal insulation and vacuum composite thermal insulation. According to the material, it can be divided into stainless steel cans, aluminum cans and others.

Gases are frequently converted to a liquid in order to facilitate convenient storage. Many gases liquefy by cooling at normal atmospheric pressure, while others require pressurization as well. Industrial gases commonly stored in this fashion include liquid oxygen, liquid nitrogen, liquefied chlorine, liquefied natural gas and liquefied petroleum gas. Liquefied gas plays a role in the ethylene industry as well. Feedstock to an ethylene plant's fractionation towers contains a liquid cryogenic hydrocarbon mixture as a result of going through compression and refrigeration trains after the quench tower.
