A liquid-carried out roofing device has a number of chemicals that work together to generate a self-flashing, seamless, and completely adhered membrane. Components include mesh membranes and liquid-applied coatings to create a real liquid-type membrane system that allows for the maintenance and protection of building integrity. Liquid roofing systems are applied to roof surfaces in liquid form and cure to create a seamless, UV resistant, and waterproof membrane. Essentially, liquid roofs act as a sacrificial shield protecting roof substrates from the sun, rain, and other environmental conditions.
