Liquid caprolactam is a chemical compound that is an intermediate in the production of nylon-6, a synthetic polymer. It is a colorless to pale yellow liquid at room temperature and is primarily used as a precursor for the synthesis of nylon-6, which is widely used in various applications, including textiles, automotive parts, engineering plastics, and more.

The global market for liquid caprolactam is closely tied to the production and demand for nylon-6. As a key raw material in the nylon-6 manufacturing process, the demand for liquid caprolactam is largely influenced by the growth and trends in industries that utilize nylon-6 and its derivatives. The region dominates the global market due to its significant presence in textile manufacturing, automotive production, and industrial activities. Countries like China, India, Japan, and South Korea are major players in both nylon-6 production and consumption. The demand for liquid caprolactam is driven by the automotive, consumer goods, and industrial sectors in countries like the United States and Canada. European countries have a substantial nylon-6 production and consumption base, driven by industries such as automotive, engineering plastics, and textiles. The future of the liquid caprolactam market will largely depend on the growth of industries that rely on nylon-6 and its derivatives. Technological advancements, innovation in nylon-6 applications, and the ongoing shift towards sustainable and bio-based materials may also influence the market dynamics.
