According to our (LP Info Research) latest study, the global Liquid Chip Technology market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Liquid Chip Technology is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Liquid Chip Technology market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Liquid Chip Technology are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Liquid Chip Technology. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Liquid Chip Technology market.

Liquid phase chip technology is an emerging technology that integrates multiple technologies such as fluorescently encoded microspheres, laser analysis, applied fluidics, and high-speed digital signal processing. It is a new generation of high-throughput luminescence detection technology that began to emerge at the end of the last century. Its most prominent advantage is that only a small number of samples can be used to simultaneously and quantitatively detect a variety of different target molecules in the same sample, that is, multiplexing. Compared with solid-phase chips, liquid-phase chips are more flexible, and the number of microspheres required for each detection and the design of the detection system can be adjusted according to needs.

The liquid phase environment is also more conducive to maintaining the natural conformation and activity of the protein, which is conducive to the reaction between the probe and the detected substance. In most reactions, no washing steps are required, and the dynamic balance of the reaction will not be destroyed, and the operation is more convenient. , more economical and other obvious advantages.
