Liquid cooled charging cables are a key component of liquid cooling rapid chargers for electric vehicles (EVs). These cables are designed to carry high currents of electricity while maintaining a cool temperature.

They achieve this by having a built-in channel that circulates coolant, typically a water-glycol mixture, around the high-voltage wires. This coolant absorbs heat generated by the resistance in the cable as it carries electricity. The coolant is then routed back to the charging station where it is cooled by a heat exchanger.

The global Liquid Cooled Charging Cables market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
