The global Liquid-Cooled Charging Pile Module For Electric Vehicles market size is predicted to grow from US\$ 2269 million in 2025 to US\$ 23530 million in 2032; it is expected to grow at a CAGR of 40.5% from 2026 to 2032.

Liquid-Cooled Charging Pile Module is an electric vehicle (EV) charging module that uses liquid cooling technology for heat dissipation. It is the core component of a supercharging station or a high-power DC fast charging pile, which can efficiently convert electrical energy and provide stable charging output. Compared with traditional air-cooled modules, liquid cooling technology can significantly improve heat dissipation efficiency, increase charging power density, and reduce module size, making the charging pile more compact and more reliable.

Liquid-cooled charging pile modules use liquid-cooled high-efficiency heat dissipation solutions and wireless decomposition solutions, and are applied to super DC charging pile systems. Liquid-cooled charging technology has become an important trend in high-power fast charging, especially with the popularization of 800V high-voltage platform electric vehicles, liquid-cooled charging pile modules are gradually becoming the mainstream of the industry.

The main players in the global liquid-cooled charging pile module include Infypower, UUGreenPower, TELD, Tonhe Electronics Technologies, Huawei, etc. Chinese companies have made rapid technological progress and their market share has grown rapidly.

Since liquid-cooled charging technology requires an efficient heat dissipation system, precise temperature control management, and high reliability, companies that master

core liquid cooling technology have a competitive advantage.
