According to our LPI (LP Information) latest study, the global Liquid Cooled General Purpose Server market size was valued at US\$ 5734.5 million in 2022. With growing demand in downstream market, the Liquid Cooled General Purpose Server is forecast to a readjusted size of US\$ 35540 million by 2029 with a CAGR of 29.8% during review period.

The research report highlights the growth potential of the global Liquid Cooled General Purpose Server market. Liquid Cooled General Purpose Server are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Liquid Cooled General Purpose Server. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Liquid Cooled General Purpose Server market.

Liquid cooled servers use working fluid as a medium for intermediate heat transfer to transfer heat from hot areas to distant locations for cooling. Since the specific heat of liquid is much greater than that of air, the heat dissipation speed is much greater than that of air, so the cooling efficiency is much higher than that of air cooling. Since the fan is omitted, the noise can also be reduced. Future generations of servers may require liquid cooling as air cooling capacity is exceeded.
