Liquid-cooled IT containers are modular data center units designed for high-heat-density computing tasks (such as AI model training, scientific computing, large-scale rendering, etc.). It uses cold plate liquid cooling or immersion liquid cooling technology to directly or indirectly contact IT equipment with coolant, effectively remove heat, significantly improve heat dissipation efficiency, and reduce PUE. Compared with traditional air-cooled computer rooms, liquid-cooled containers have higher energy efficiency, lower noise, smaller footprint, and stronger environmental adaptability. They are suitable for occasions such as rapid expansion of data centers, edge node deployment, and temporary project support.
