In a computer, water cooling or liquid cooling is a system used to reduce the temperature of its hardware, specifically the CPU and GPU. Liquid is more efficient than gas at conducting thermal energy, so liquid cooled machines maintain desired operating temperatures better than their air cooled counterparts.

Liquid cooling is the reduction of heat in electronic and mechanical devices through exploiting the properties of liquids. Liquid cooling is a firmly established cooling method in many current technologies. Automobiles, mainframes and the systems of computer enthusiasts have used watercooling for many years.
