The global Liquid Crystal Polymer (LCP) Film for 5G market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

LCP film is a thin-film material made of liquid crystal polymer (LCP) material with excellent various properties and is mainly used in the 5G field. Liquid crystal polymers are a relatively unique class of partially crystalline aromatic polyesters based on 4-hydroxybenzoic acid and related monomers. Liquid crystal polymers are capable of forming regions of highly ordered structure while in the liquid phase. However, the degree of order is somewhat less than that of a regular solid crystal. Typically, LCPs have outstanding mechanical properties at high temperatures, excellent chemical resistance, inherent flame retardancy, and good weatherability. Liquid crystal polymers come in a variety of forms from sinterable high temperature to injection moldable compounds.
