The global Liquid Dextrose market size is predicted to grow from US\$ 8249 million in 2025 to US\$ 11350 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

Liquid Dextrose refers to a glucose-rich syrup produced from starch hydrolysis, typically with 70–75% solids, and widely used in confectionery, bakery, beverages, brewing, pharmaceuticals, and fermentation industries. In 2024, the global average price of liquid dextrose is approximately US\$0.37 per kilogram, with worldwide production reaching about 21.8 million tons. Gross margins commonly fall between 9%–18%, influenced by corn price fluctuations, conversion yield, refining technology, and transportation cost. The supply chain consists of upstream corn/wheat starch, enzymes and hydrolysis catalysts; midstream processors handle saccharification, refining, evaporation and quality control; downstream customers include candy manufacturers, beverage companies, breweries, pharmaceutical formulators, fermentation plants and food processors.

Demand for liquid dextrose continues to expand steadily, supported by its cost-effectiveness, high sweetness stability and compatibility with large-scale food processing. Growing usage in fermentation, biomanufacturing and non-alcoholic beverages enhances structural demand. Despite margin pressure from volatile corn prices, capacity expansion in Asia and improvements in saccharification efficiency will maintain stable supply and moderate growth through 2031.
