The global Liquid Diaphragm Pumps market size is predicted to grow from US\$ 2076 million in 2025 to US\$ 3143 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

A liquid diaphragm pump is a positive displacement pump that uses compressed air, electricity or liquid pressure as a power source to transport various media through the reciprocating motion of the diaphragm in the pump body. It is mainly composed of an actuator and a valve. The actuator drives the diaphragm, and the movement of the diaphragm causes the fluid in the pump body to be sucked in and discharged. Liquid diaphragm pumps have the characteristics of simple structure, convenient maintenance, and reliable operation. They are especially suitable for transporting corrosive, particulate, flammable, explosive or highly toxic liquids.

Medium-sized industrial pumps range in price from \$500 to \$3,000, with annual procurement volumes ranging from 1,000 to 100,000 units. Manufacturers typically have an annual production capacity of approximately 10,000 to 50,000 units per line, with overall gross profit margins ranging from 35% to 60%.

The liquid diaphragm pump market is at a critical stage of technological upgrading and application expansion, with its upstream and downstream structure becoming increasingly clear: the upstream sector includes diaphragm material suppliers, pump casting foundries, and drive system manufacturers, while the downstream sector encompasses water treatment plants, chemical companies, medical equipment manufacturers, and food processing plants. With the increasing integration of automation and intelligent control (such as PLCs and IoT), the use of high-performance materials has significantly improved the corrosion and wear resistance of pumps,

leading to rapid growth in demand for micropumps, particularly in the medical and analytical instrumentation sectors. Furthermore, double-diaphragm pumps are becoming a mainstream product due to their ability to accommodate high-viscosity and high-solids liquids. The Asian market, particularly China and India, is becoming a core of global growth.
