Liquid floated gyroscope, also known as a fluid-based gyroscope or liquid ring gyroscope, is a type of sensor or device used for measuring angular velocity or orientation. It operates on the principle of utilizing a rotating liquid, typically a viscous fluid or a gas-liquid mixture, as the sensing element. The gyroscope's sensitive axis is aligned with the desired measurement direction, and as the gyroscope rotates, the liquid

experiences forces due to angular motion, resulting in measurable changes that are used to determine the gyroscope's angular velocity or orientation.
