The global Liquid-Gas Heat Exchanger market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A liquid/gas heat exchanger is a device used to transfer heat, typically to regulate the temperature difference between fluids (liquid or gas). Its main function is to transfer thermal energy between two fluids so that the temperature difference between them is reduced. This type of equipment is common in many industrial and household applications. The basic working principle of a liquid/gas heat exchanger is to transfer heat from one fluid to another through thermal conduction. Typically, it consists of a heat-sensitive surface through which two fluids flow separately. When one of the fluids is hotter than the other, heat is transferred from the higher-temperature fluid to the lower-temperature fluid, causing their temperatures to equalize.

United States market for Liquid-Gas Heat Exchanger is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Liquid-Gas Heat Exchanger is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
