The global Liquid Helium for MRI Machines market size is predicted to grow from US$ 253 million in 2025 to US$ 410 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

The liquid helium for MRI machines market comprises the entire chain of value, products and services associated with the supply and use of liquid helium (LHe) specifically for cooling superconducting magnets in MRI systems. That includes upstream extraction and purification of helium from natural gas or recovered sources, midstream liquefaction and cryogenic storage, and downstream logistics, distribution, and onsite management (Dewars, bulk tanks, transfer systems, and re-liquefiers). The market also embraces related services such as Dewar rental programs, managed supply contracts, helium recovery and re-liquefaction installations, telemetry and inventory monitoring, emergency response for magnet quenches, and aftermarket maintenance tied to cryogenic systems. By definition, the market excludes helium used for unrelated industrial or research purposes, focusing on medical and clinical imaging applications, plus closely tied uses such as MRI OEM production and field commissioning.

In 2024, global Liquid Helium for MRI Machines production reached approximately 14 million m? , with an average global market price of around US$ 17.2 per m?. The global single-line production capacity ranges from 200 to 400 K m? per year. The industry's gross profit margin is approximately 25%-35%.

United States market for Liquid Helium for MRI Machines is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
