A dilution refrigerator is a high-end scientific research instrument that can provide an environment close to absolute zero. It is widely used in scientific research fields such as condensed matter physics, materials science, particle physics and even astronomical detection. The liquid helium-free dilution refrigerator is the lowest temperature refrigerator available commercially. It can achieve an extremely low temperature of only 0.01 degrees above absolute zero without the assistance of liquid helium. It can provide quantum computer chips with the extremely low temperature environment necessary to maintain the quantum state. Quantum computing is the main battlefield of scientific and technological competition among countries in the world. The dilution refrigerator provides the necessary extremely low temperature environment for the normal operation of quantum computers and is an irreplaceable key equipment in quantum computing research. Different from traditional wet dilution refrigerators that rely on liquid helium to assist in cooling, liquid helium-free dilution refrigerators do not require liquid helium supply, have large sample space, long continuous operation time and convenient operation and maintenance. They have rapidly become popular in the past decade and have become the mainstream of the market.

The global Liquid Helium Free Dilution Refrigerator market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
