Liquid hydrogen storage tank is a special storage container designed to store liquid hydrogen at extremely low temperature and high pressure. Liquid hydrogen is a cryogenic substance, which means that it is kept at a temperature below - 253 ° C (- 423 ° F) to keep liquid. The density of hydrogen is very low, so special storage tanks

are required to withstand the extremely low temperature and high pressure required to maintain the liquid. Liquid hydrogen storage tanks are usually made of high-strength steel or aluminum, and have multiple layers of insulation to reduce heat transfer and maintain low temperature. They are equipped with safety functions, such as pressure relief valve, bursting disc and emergency vent, to ensure safe operation.
