Abstracts

The global Liquid Hydrogen On-Board Storage Tank market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

High energy density: The energy density of liquid hydrogen is much higher than other hydrogen storage methods, allowing liquid hydrogen on-board storage tanks to provide longer cruising range. **High storage efficiency:** The density of liquid hydrogen at normal temperature and pressure is very small, but after liquefaction at low temperature, the volume is reduced by nearly 200 times, making the storage efficiency very high.

Environmental protection: Liquid hydrogen is made from hydrogen gas through cooling and pressurization. Its combustion product is water. It has no pollution and no greenhouse gas emissions. It is a very environmentally friendly energy source.
