A Liquid Ice System is a cooling technology that uses a slurry of fine ice crystals suspended in a liquid (usually water or a coolant mixture) to provide efficient thermal energy storage and transfer. Unlike traditional chilled water systems, liquid ice can store and deliver significantly more cooling capacity due to the latent heat of fusion when the ice melts. This system is often used in HVAC, industrial refrigeration, and energy management applications to reduce peak electricity loads, improve energy efficiency, and provide stable temperature control. It enables off-peak ice production and on-peak cooling delivery, making it ideal for smart grid and demand-response environments.

United States market for Liquid Ice System is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
