The biggest difference between the liquid lens and the traditional optical lens is the material. The liquid lens is not composed of glass or resin material with a fixed shape, but is composed of a special liquid, which is flexible and can be deformed. The liquid lens acts as if the lens of the human eye is pulled by the ciliary muscle, which can achieve rapid zooming and focusing by changing the degree of curvature of the lens.

There are two main types of liquid lenses: reflective liquid lenses and refractive liquid lenses.
