The global Liquid Metal Surface Treatment Coating market size is predicted to grow from US\$ 471 million in 2025 to US\$ 771 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

In 2025, global Liquid Metal Surface Treatment Coating production reached approximately 5,500 tons, with an average global market price of around 87,500 US\$/ton.

Liquid Metal Surface Treatment Coating is a specialized functional coating formulated with liquid metal (such as gallium-based, bismuth-based alloys) as the core component, combined with binders, dispersants, and functional additives, designed to form a dense, high-performance protective layer on the surface of metal or non-metal substrates. Unlike traditional surface coatings, it leverages the unique properties of liquid metals?such as excellent thermal conductivity, electrical conductivity, corrosion resistance, and ductility?to enhance the substrate?s performance, including improving wear resistance, anti-corrosion ability, thermal dissipation, and electrical conductivity. It can be applied via spraying, brushing, or dipping, forming a uniform, adherent film that adheres tightly to the substrate, and is widely used in industries such as electronics, automotive, aerospace, and machinery to protect components, extend service life, and optimize functional performance.

The demand for Liquid Metal Surface Treatment Coating is driven by the upgrading of industrial manufacturing, the growing demand for high-performance component protection, and the expansion of application scenarios requiring excellent thermal and electrical conductivity. With the rapid development of electronic devices (e.g., high-power chips, 5G equipment), automotive lightweight, and aerospace precision

manufacturing, the need for coatings that can provide superior protection and functional enhancement continues to rise. Business opportunities lie in strengthening R&D to optimize liquid metal formulation, improve coating adhesion and durability, and reduce production costs, developing segmented products for specific industries (e.g., high-thermal-conductivity coatings for electronics, anti-corrosion coatings for automotive parts). Additionally, cooperating with downstream component manufacturers, aerospace enterprises, and electronic device producers, and tapping into emerging fields such as new energy and precision machinery, can further expand market share, leveraging the unique advantages of liquid metal to gain a competitive edge in the high-end surface treatment market.
