Solid phase peptide synthesis (SPPS) is a technique for peptide synthesis. It can be defined as a process in which a peptide anchored by its c-terminus to an insoluble polymer is assembled by the successive addition of the protected amino acids constituting its sequence. Liquid-phase peptide synthesis is a hybrid method that combines the advantages of solution-phase and solid-phase chemistry. The approach is best suited for the synthesis of short peptides (up to 20 amino acids) for purity-sensitive applications such as: Therapy.
