The global Liquid Nitrogen Blast Freezer Equipment market size is predicted to grow from US$ 171 million in 2025 to US$ 204 million in 2031; it is expected to grow at a CAGR of 3.0% from 2025 to 2031.

Liquid nitrogen quick-freezing equipment is mainly used for quick-locking and quick-freezing of seafood, aquatic products, beef and mutton, poultry, cooking bags, high-end pasta and other products.

Liquid nitrogen quick-freezing equipment is a kind of equipment for quick-freezing with liquid nitrogen, which is widely used in food processing, biomedicine, scientific research and other fields. Liquid nitrogen quick-freezing equipment directly contacts or sprays liquid nitrogen on food or samples to make it reach an extremely low temperature quickly to achieve the effect of quick freezing. Liquid nitrogen quick-freezing equipment needs a container for storing liquid nitrogen to supply liquid nitrogen to the quick-freezing chamber or quick-freezing chamber. After liquid nitrogen enters the quick-freezing chamber or quick-freezing cavity, its surface temperature is rapidly reduced by spraying or directly contacting food or samples. The extremely low temperature of liquid nitrogen (approximately -196°C) allows food or samples to be frozen quickly. Due to the rapid cooling effect of liquid nitrogen, an ice layer is formed on the surface of the food or sample, which quickly takes away the heat and reduces the internal temperature rapidly, thereby realizing rapid freezing.
