The global Liquid Nitrogen Cooled Infrared Detector market size is predicted to grow from US$ 226 million in 2025 to US$ 304 million in 2031; it is expected to grow at a CAGR of 5.1% from 2025 to 2031.

Liquid nitrogen cooled infrared detector is a high-performance infrared detection device based on the photoelectric effect of semiconductor materials, the application of refrigeration technology and the detection process of infrared radiation. When infrared radiation irradiates the detection element, it will excite the carriers in the element to generate current. The magnitude of this current is proportional to the intensity of the infrared radiation. Therefore, the intensity of the infrared radiation can be inferred by measuring the current. Liquid nitrogen cooled infrared detectors have the characteristics of high sensitivity, high resolution, high response speed and wide-band response. They are widely used in military fields such as reconnaissance and security monitoring, as well as civilian fields such as medical diagnosis and scientific research.

United States market for Liquid Nitrogen Cooled Infrared Detector is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Liquid Nitrogen Cooled Infrared Detector is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
