A liquid nitrogen gun is a device that uses liquid nitrogen as a cooling medium. It is usually used in medical, scientific research and industrial fields. It rapidly cools down by injecting gaseous liquid nitrogen and is commonly used for: Medical purposes: In cryotherapy, a liquid nitrogen gun can be used to remove diseased tissue on the skin, such as warts and tumors. It causes cell death by instantly cooling the tissue. Materials Research: In materials science, liquid nitrogen guns are used to cool materials to study their properties at extremely low temperatures. Laboratory use: In some laboratory operations, liquid nitrogen guns can be used to quickly cool samples or equipment. Liquid nitrogen is an extremely cold liquid, with a temperature of approximately -196°C , so appropriate safety measures need to be taken when using a liquid nitrogen gun to prevent frostbite or other accidental injuries.
