A liquid nitrogen vacuum trap is a device that utilizes the low-temperature properties of liquid nitrogen to capture and condense gases or vapors in vacuum systems. It is commonly employed in high and ultra-high vacuum systems to remove water vapor, oil vapor, or other volatile substances, thereby improving the vacuum level and system stability. The trap consists of an inner container filled with liquid nitrogen, which lowers the surface temperature to -196°C, enabling gas condensation. Liquid nitrogen vacuum traps are widely used in semiconductor manufacturing, chemical experiments, freeze-drying processes, and biological sample preparation, effectively preventing contamination and enhancing the accuracy of experiments or production processes.

United States market for Liquid Nitrogen Vacuum Traps is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
