The global Liquid-Phase Transmission Electron Microscopy market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Liquid phase transmission electron microscopy is a new type of transmission electron microscope. It not only has the nanoscale spatial resolution of transmission electron microscopy, but also can perform real-time monitoring of humid environments. The realization of liquid-phase transmission electron microscopy relies on the development of liquid cells and the micro-nano processing techniques and technologies involved. The liquid storage unit is made through micro-nano processing, and is fixed on the head of an ordinary sample rod or a special liquid sample rod, and is placed in an electron microscope for observation to achieve direct visual research on chemical, physical processes and biological phenomena occurring in the solution environment.

United States market for Liquid-Phase Transmission Electron Microscopy is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Liquid-Phase Transmission Electron Microscopy is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
