Rapidly changing technology trends in electric vehicle manufacturing are driving silicone manufacturers to adopt innovative approaches to produce customized products. Liquid silicone rubber solutions for new energy vehicles mainly have four applications: sealing and waterproofing, safety protection, structural thermal conductivity, and lightweight. Liquid silicone elastomers are the most prominent product segment in the electric vehicle market and its growth can be attributed to its wide range of applications such as seals, housings and gaskets for thermal insulation of various components such as connector seals, heat sinks etc., forming a heat shield around the battery pack to protect the battery cells from overheating or overcooling. Additionally, custom designs can insulate or help dissipate heat to ensure optimal operating temperatures. To accommodate demanding spaces, silicone is designed to withstand severe vibrations. Short circuits and overcurrents are the main causes of battery failure in electric vehicles. The dielectric properties of silicone rubber can protect and isolate key components, protecting batteries and busbars from surges and helping to prevent battery fires.

The global Liquid Silicone for Electric Vehicles market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
