## Abstracts

The global Liquid Sodium N-Butanol market size is predicted to grow from US\$ 102 million in 2025 to US\$ 141 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

Liquid n-butanol sodium refers to a product delivered in the form of a solution of n-butanol sodium, usually dissolved in anhydrous n-butanol to form a homogeneous solution of a certain concentration. The common commercial specification is a mass fraction of about 19% to 20%, which can also be indicated by molar concentration; It belongs to strongly alkaline organic alkoxide solutions, with strong hygroscopicity, easy to react quickly with water and acid, and can react with carbon dioxide to generate carbonate impurities. Therefore, storage and use generally require sealing and moisture-proof measures, and are carried out under inert gas protection; Its main use is as a strong base and n-butoxylation reagent in organic synthesis and fine chemical engineering, used in reaction steps such as deprotonation, etherification, condensation, and cyclization. Compared with the solid form, the solution form is convenient for metering and continuous feeding, reducing the risk of dust and local heat release. However, the transportation and storage costs are higher, and the requirements for moisture control and hazardous chemical regulations are stricter. In 2025, global Liquid Sodium N-Butanol production reached approximately 39.61 K MT, with an average global market price of around US\$ 2,637 per MT.

The annual production capacity of liquid sodium n-butanol is 60 K MT, with a gross profit margin of about 25%.

The main upstream raw materials are n-butanol and sodium source, with sodium source mostly being metallic sodium. The supporting facilities also include inert gas nitrogen,

drying and dehydration materials, solvent circulation and recovery system, closed metering and filling components, barrel or ton barrel and inner lining sealing materials, as well as hazardous chemical storage and transportation services.

The downstream mainly enters the process systems of pharmaceutical and pesticide intermediate synthesis, fine chemical reactions, n-butoxylation and etherification condensation cyclization, and is also used for partial polymerization and special material synthesis. Customers are mostly pharmaceutical and chemical plants, agrochemical enterprises, fine chemical plants, reagents and distribution channels with anhydrous inert process capabilities. Among them, continuous production and metering feeding scenarios prefer solution form.

The cost of raw materials usually accounts for 65% to 80% of the total cost, manufacturing expenses account for about 6% to 12%, packaging and hazardous chemical logistics account for about 8% to 18%, quality inspection and document system account for about 3% to 6%, environmental safety compliance and loss disposal account for about 2% to 6%, and management and sales account for about 3% to 7%.

United States market for Liquid Sodium N-Butanol is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
