## Abstracts

The global Liquid Specific Gravity Refractometer market size is predicted to grow from US\$ 233 million in 2025 to US\$ 313 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

A liquid pycnometer, also known as a density refractometer or a pycnometer, is an instrument used to measure the specific gravity and refractive index of a liquid sample. It combines the ability to measure the density (specific gravity) and refractive index of a sample, providing measurements of these two key parameters in the same device. These instruments are used in various fields for quality control, production monitoring, research analysis, etc. Future liquid specific gravity refractometers may achieve higher measurement accuracy to meet the demand for precise data. This is very important for demanding industrial and laboratory applications.
