The global Lithium Battery for Electronic Devices market size is predicted to grow from US\$ 27195 million in 2025 to US\$ 40873 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

Lithium-ion batteries for electronic devices refer to rechargeable lithium-ion and lithium-polymer batteries used in smartphones, laptops, tablets, smartwatches, TWS earbuds, Bluetooth speakers, AR/VR devices, e-readers, digital cameras, power banks, smart-home terminals, small medical electronics and other portable electronic devices. The main product forms include pouch lithium-polymer cells, cylindrical lithium-ion cells, small prismatic cells, rechargeable coin-type lithium batteries and customized-shaped cells. Key performance indicators include energy density, cycle life, fast-charging capability, safety, thickness, miniaturization, rate capability, low-temperature performance and mechanical design flexibility.

From the perspective of the global supply landscape, the market for lithium-ion batteries used in electronic devices is dominated by Asian manufacturers, especially companies from mainland China, Hong Kong, South Korea, and Japan. ATL is a representative leader in pouch lithium-ion batteries for consumer electronics and has long served smartphones, laptops, tablets, wearables, and other high-end consumer electronics customers. Samsung SDI, LG Energy Solution, and Panasonic have deep technical expertise in small cylindrical, pouch, prismatic, and IT-device batteries. Mainland Chinese companies such as Sunwoda, CosMX, Desay Battery, EVE Energy, Lishen, Highpower, and Grepow have built a complete supply hierarchy across smartphones, laptops, wearables, TWS earbuds, power banks, and small smart hardware. From a product roadmap perspective, pouch lithium-polymer batteries remain the mainstream form factor for smartphones, tablets, lightweight laptops, and wearable devices. Their

advantages lie in thin and lightweight design, flexible shaping, high space utilization, and high energy density. Cylindrical batteries still retain advantages in cost, manufacturing maturity, and consistency in laptops, power banks, small tools, and certain electronic devices. Coin-type and customized-shaped batteries are benefiting from the growth of TWS earbuds, smartwatches, AR/VR devices, smart glasses, and small IoT devices. LG Energy Solution clearly positions its IT-device batteries for smartphones, laptops, and wearables, while Samsung SDI Europe classifies small-sized lithium-ion batteries into cylindrical, prismatic, and polymer-type batteries. This indicates that mainstream suppliers still organize their strategies around both form factor and end-use applications. From the perspective of technology upgrades, high energy density, fast charging, safety, and customized form factors are the core competitive directions for lithium-ion batteries used in consumer electronics. Flagship smartphones and lightweight terminals require batteries to deliver higher capacity within limited space while also meeting requirements for fast charging, thermal management, and long cycle life. Laptops and tablets place greater emphasis on capacity, weight, thickness, and safety certification. TWS earbuds and wearables focus more on miniaturization, low leakage, and form-factor adaptability. High-silicon anodes, stacking processes, customized pouch cells, fast-charging electrolytes, and refined safety designs are becoming important differentiation points for leading suppliers. The public information that Group14 supplies silicon battery materials to ATL for next-generation smartphone batteries also reflects the continued evolution of consumer electronics batteries toward higher energy density and faster charging. Future competition will develop along two main tracks. The first is competition in the high-end consumer electronics supply chain, centered on flagship smartphones, laptops, AR/VR devices, wearables, and premium TWS earbuds, where companies will compete on energy density, thinness, fast-charging performance, safety, customer qualification, and large-scale consistency. The second is competition in the mid-to-low-end and long-tail electronic device market, covering power banks, small IoT devices, replacement batteries, and regional brands, where competition will focus on cost, delivery, customization, and channels. Overall, lithium-ion batteries for electronic devices are not a high-capex expansion market like EV batteries, but they are still expected to maintain steady growth, driven by thinner and lighter consumer electronics, AI terminals, wearables, TWS earbuds, AR/VR devices, and upgrades in high-silicon fast-charging technologies.
