A lithium battery cell laser film removal machine is a type of equipment used to remove the protective film on the surface of lithium battery cells using laser technology. The protective film is usually applied to lithium battery cells to prevent moisture, dust, and other contaminants from entering the cell, ensuring its performance and longevity. The laser film removal machine utilizes a laser beam to selectively heat and vaporize the protective film, causing it to detach from the surface of the battery cell. This process is precise and efficient, ensuring the removal of the film without damaging the underlying

battery cell. This machine is commonly used in the manufacturing and assembly processes of lithium batteries, particularly in the production of lithium-ion batteries for various applications such as electric vehicles, portable electronic devices, and renewable energy storage systems. The laser film removal machine helps to automate and streamline the battery production process, improving efficiency and ensuring high-quality battery cells.
