Lithium battery defoamers are highly effective additives specifically designed for use in the lithium battery production process. They are primarily used in electrode slurry mixing, coating, roller pressing, and electrolyte injection processes, effectively suppressing or eliminating bubbles generated by mixing high-viscosity materials or flowing liquids. Core ingredients include silicones, polyethers, or modified silicone oils, which exhibit excellent dispersibility, low surface tension, and compatibility with battery material systems. These defoamers prevent problems such as coating defects, uneven electrode interfaces, increased internal resistance, and decreased cycle life caused by residual bubbles, without compromising electrochemical performance. They are key auxiliary materials for ensuring the consistency, safety, and production yield of lithium batteries.In 2024, the global production of lithium battery defoaming agents will reach 108,040 tons, with an average selling price of US$1,738 per ton.

United States market for Lithium Battery Defoamer is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Lithium Battery Defoamer is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
