Lithium battery flame retardant insulation materials are high-performance materials specially used to protect lithium-ion battery packs. Their main purpose is to prevent fires caused by overheating or short circuits during use, while effectively controlling the temperature of the battery pack to ensure its safe operation in various environments. These materials can effectively block the transfer of heat in high-temperature environments and prevent thermal runaway caused by overheating of the battery. In addition, they also have good fire resistance and can inhibit the spread of flames when a short circuit or thermal runaway occurs in the battery, thereby avoiding the occurrence of fires.

The global Lithium Battery Flame Retardant Insulation Material market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
