The global Lithium Battery Modeling and Simulation Software market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Lithium-ion (Li-ion) batteries are used to power a wide range of devices, from toys, drones, cell phones and laptops to medical equipment and electric vehicles. To effectively power such devices, the temperature distribution inside an operating lithium-ion battery needs to be controlled, as deviations from optimal operating temperatures can cause it to degrade or fail. Battery simulation can be divided into multiple scales, from the microscopic scale of molecules and atoms, to the mesoscopic scale of active material particles to electrode plates, and from the macroscopic scale of cells and modules to battery packs. Lithium battery simulation software is not only responsible for the function of simulation-driven forward design, but also an important force in promoting the digitalization process of R&D in the overall lithium battery field.

United States market for Lithium Battery Modeling and Simulation Software is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
